

Figures and Tables in L^AT_EX

Daily Toolkit Deep Dive — Section 4

July 23, 2026

1 Inserting a figure with `graphicx`

Figure 1 was generated by `make_placeholder_figure.py` (a small matplotlib script) and inserted with `\includegraphics`. It is a synthetic decaying curve, not a real training run — the point of this demo is the L^AT_EX mechanism, not the numbers.

Figure 1: A placeholder training curve generated by matplotlib and embedded with `graphicx`.

2 A three-line table with `booktabs`

Table 1 uses `\toprule`, `\midrule`, and `\bottomrule` from the `booktabs` package instead of the `boxed`, `every-cell-has-a-border` style that word processors default to. This three-line style (three horizontal rules, no vertical rules) is the de facto standard for tables in ML conference papers.

Table 1: Toy comparison table (numbers are illustrative, not from a real experiment).

Method	Win rate (%)	KL to reference
SFT only	50.0	0.00
DPO ($\beta = 0.1$)	68.4	3.21
DPO ($\beta = 0.5$)	61.2	1.05
